1985 POPULATION TRENDS FOR WASHINGTON STATE

OFM
OFFICE OF FINANCIAL MANAGEMENT

P85-16 Policy Analysis and Forecasting Division

HIGHLIGHTS

- Washington's estimated April 1, 1985, population is 4,384,100. This is an increase of 56,000 (1.3 percent) over last year's population of 4,328,100. Net inmigration for the 1984-1985 period was 21,300, compared to an estimated net gain of 7,172 for 1983-1984.

- Sixty-eight cities and towns conducted an actual count of their population in 1985.

- Between 1980 and 1985, cities and towns annexed 84.14 square miles of land inhabited by 23,238 people. During the 1980s, municipalities have been annexing territories at an increasing rate, but these territories are less populous and generally smaller than those annexed during the 1960s and 1970s.

- Washington's nonwhite population has grown by 16.8 percent since 1980. Asians show the largest growth of all the state's nonwhite populations, increasing from 110,052 in 1980 to 141,319 (28.4 percent) since 1980.

- Annual births in Washington are declining. Births, which rose from 53,096 in 1972 to 70,051 in 1982, dropped to 68,713 in 1984 and to an estimated 68,600 in 1985.

- The number of marriages and divorces in Washington have declined for the third consecutive year. From 1981 to 1984, marriages dropped from 49,973 to 45,080; divorces dropped from 29,511 to 26,999.

- Military presence in Washington is increasing. Armed forces personnel in the state, which totaled 53,268 in 1980, have now increased to 60,310. This is an increase of 7,042, or 13.2 percent, during the 1980 - 1985 period.

PREFACE

Population Trends provides current demographic data for cities, towns, and counties in Washington State.

April 1, 1985, population determinations shown in Table 1 represent a significant cooperative effort by the Policy Analysis and Forecasting Division staff and local government personnel. Sixty-eight cities and towns conducted an actual count of their population in 1985. The nationally recognized quality of Washington's population program is due to the excellent housing and special census data and other information provided by local jurisdictions.

The 1985 city and town estimates will be used in the allocation of state revenues beginning January 1986 (RCW 43.62.030). The 1985 estimates of unincorporated area populations will be used to allocate state liquor sales profits to counties beginning September 1985 (RCW 66.08.200) and liquor excise tax revenue beginning October 1985 (RCW 82.08.170).

1984 estimates of Washington's population by racial categories and of the Spanish Origin population are included in this year's publication. Racial/ethnic estimates are published on a one year lag basis because they require data that are not available until fall.

The Technical Notes section contains several reports of interest. These include reports on municipal annexation trends over the past 25 years, changes in household size since 1980, and a preview of forthcoming revisions to the Washington State Census Enumerator's Manual. We continue to encourage anyone who prepares population estimates for cities, towns, or counties to share their experiences and knowledge by submitting an article for publication.

ACKNOWLEDGEMENTS

Special thanks are given to the following persons and agencies because of their continued help and cooperation in the publication of Population Trends: the Vital Statistics Health Data Section, Department of Social and Health Services, for supplying vital statistics data; the Office of Research and Data Analysis, Department of Social and Health Services, for providing of selected institutional population counts; the Department of Veteran's Affairs, for furnishing veteran institutional counts; the housing directors of the colleges and universities, for submitting April 1 dormitory counts; the Armed Forces personnel at major bases in the state for contributing excellent data on current armed forces counts; and all of the city staff, and county and regional planners for providing data used in the development of our April 1 estimates.

We welcome comments regarding the content or format of this publication.

NOTE:

1. TOTAL POPULATION COUNTS FOR THE FOUR WASHINGTON CITIES SPLIT BETWEEN TWO OR MORE COUNTIES ARE:

	1980	1981	1982	1983	1984	1985
BOTHELL	(NO SPLIT)	(NO SPLIT)	7,490	7,600	7,780	8,482*
COULEE DAM	1,439*	1,384*	1,271	1,296*	1,243*	1,223*
MILTON	3,162	3,220	3,160	3,400	3,470	3,770
WOODLAND	2,415*	2,470	2,555	2,610	2,550	2,850

2. MILL CREEK INCORPORATED IN SEPTEMBER 1983.

3. THE COUNTY AND MUNICIPAL POPULATIONS SHOWN FOR 1980 ARE, WITH A FEW EXCEPTIONS, THE 1980 FEDERAL CENSUS FINAL COUNTS. JURISDICTIONS WILL BE ADVISED IF ANY FURTHER CORRECTIONS ARE RECEIVED.

4. (*) CITIES AND TOWNS WITH MARCH 1, 1980 CITY SPECIAL CENSUS COUNTS GREATER THAN THE FEDERAL 1980 CENSUS COUNT, AND THOSE WHICH TOOK A SPECIAL CENSUS IN SUBSEQUENT YEARS.

5. 1980 FEDERAL CENSUS COUNT HAS BEEN ADJUSTED FOR ANNEXATIONS FROM JANUARY 1, 1980 TO APRIL 1, 1980.

6. THE 1981 ESTIMATES HAVE BEEN REVISED ON THE BASIS OF CORRECTIONS TO THE 1980 CENSUS COUNTS THAT WERE PROVIDED BY THE BUREAU OF THE CENSUS IN CORRESPONDENCE DATED AUGUST 18, 1981 AND FEBRUARY 18, 1982.

7. (@) INDICATES A CORRECTION TO THE 1980 CENSUS COUNT AND/OR A REVISED 1981 ESTIMATE.

8. WITH THE EXCEPTION OF CORRECTIONS TO THE FEDERAL CENSUS COUNTS, ANNUAL ESTIMATES IN THIS OFFICIAL SERIES ARE NOT REVISED ON THE BASIS OF OTHER INFORMATION THAT BECOMES AVAILABLE AFTER THE ESTIMATE DATE. REVISED COUNTY ESTIMATES ARE PUBLISHED REGULARLY IN A REVISED COUNTY SERIES.

Notes:

1980 federal census counts are adjusted for annexations January 1, 1980 to April 1, 1980 and all federal census corrections through November 1982.

Figures do not include changes in mobile home and trailer parks in most unincorporated areas.

Total housing stock for the four Washington cities that are split between two or more counties are shown below:

	1980	1981	1982	1983	1984	1985
Bothell	-	-	3,143	3,207	3,266	3,465

[1] This series of estimates corrects for the coverage errors in the 1970 census, and will not match previously published estimates of the population aged 65 years and over.

[2] 1970 census population aged 65 years and over corrected for coverage errors. A state level adjustment factor was used to correct 1970 census county population as more detailed correction factors were not available. The state correction factor was developed from series SOR 31- WCF-1 BACF-1 described in Demographic Estimates of the Coverage of the Population of States in the 1970 Census: Demographic Analysis, Current Population Reports, series P-23, No. 65, released by the Bureau of the Census in a memorandum to Federal-State Cooperative Program members, April 6, 1983.

Note: Armed forces personnel reflect resident military personnel as defined by the U.S. Bureau of the Census. Annual estimates are developed on the basis of July 1 station strength counts by the Department of Defense and information provided by military installations in Washington. Sharp variations in the figures for Kitsap County reflect changes in the number of ships and naval personnel at the Puget Sound Naval Shipyard.

Spanish Origin[4]	57,358	120,016	62,658	109.2	128,014	7,998	6.7

[1]Specific populations included in each racial category are shown below:

White: Peoples of Europe, North Africa, and Middle East

Black: Negro, African, Black Puerto Rican, West Indian

Indian: American Indian

Asian: Japanese, Chinese, Filipino, Korean, Hawaiian, Asian Indians, South East Asians, Vietnamese, Pacific Islanders, Guamanian, Samoan

Other: Cuban, Puerto Rican, Mexican, Dominican, Central and South American. The Other Races category is primarily a count of persons who marked "Other Race" on the 1980 census questionnaire and wrote in entries such as Cuban, Puerto Rican, Latino, Mexican, Dominican, etc. They represent persons who, when given an opportunity to identify themselves in a racial category, did not select White (or any other category provided), but specifically identified themselves as being Mexican, Puerto Rican, Latino, etc. In 1980 this category represented a tabulation of 67,154 Spanish persons who considered themselves racially Spanish and some 9,402 additional responses that could not be elsewhere classified.

[2]Census definitions used to tabulate the population by race changed in 1980. 1970 census counts have been adjusted to match 1980 counts.

[3]1980 Federal Bureau of the Census Summary Tape File 1(STF1) total counts.

[4]Spanish Origin is not a race category; it may be viewed as a nationality group. Persons of Spanish Origin may be of any race and are counted in the racial categories shown. In 1980, 44.4 percent of the persons who indicated they were of Spanish Origin identified themselves as being racially White; 47.6 percent selected the Other Races category. Very small percentages identified themselves as being Black (1.3 percent), Indian (2.3 percent) or Asian (4.4 percent).

NOTE: Estimates for racial and Spanish Origin categories are variable because of the small numbers involved. Caution is advised in interpreting 1980-84 change for categories of less than 500 persons.

[1]The Other Races category is primarily a count of persons who marked "Other Race" on the 1980 census questionnaire and wrote in entries such as Cuban, Puerto Rican, Latino, Mexican, Dominican, etc. They represent persons who when given an opportunity to identify themselves in a racial category did not select white (or any other category provided), but specifically identified themselves as being Mexican, Puerto Rican, Latino, etc. In 1980 this category represented a tabulation of 67,154 Spanish persons who considered themselves racially Spanish and some 9,402 additional responses that could not be elsewhere classified.

[2]Spanish Origin is not a race category; it may be viewed as a nationality group. Persons of Spanish Origin may be of any race and are counted in the other racial categories shown. In 1980, 44.4 percent of the persons who indicated they were of Spanish Origin identified themselves as being racially white; 47.6 percent selected the Other Races category. Very small percentages identified themselves as being black (1.3%), Indian (2.3%) or Asian (4.4%).

[3]1980 Federal Bureau of the Census Summary Tape File 1(STF1) total counts.

[4]1980 Federal Bureau of the Census STF1 counts with adjustments from sample count STF3 data. To expedite the processing of total count items, the U.S. Bureau of the Census did not reclassify Asian "write in" responses (e.g., Laotion, Cambodian, Fiji Islander, Pakistani), to the Asian category. Thus, total count tabulations undercount Asians and overstate Other Races. The Asian category shown includes 102,537 Asians counted in STF1 and 7,515 Asian write in responses identified by county in the processing of sample count items in STF3. The Other Races category shown reoresents the 84,071 Other Races tabulated in the complete count processing less the 7,515 Asian write in responses identified by county in the sample count (STF3) processing and moved to the Asian category.

[5]1984 estimates of the Spanish Origin population were developed from the 1984 estimates of the population by racial category: The 1980 number of Spanish Origin persons in each racial category was divided by racial category total (e.g., black of Spanish Origin/total black). These proportions were applied to the 1984 racial category estimates and summed to derive an estimate of total Spanish Origin population. It was assumed that none of the Asian write in responses temporarily tabulated in the Other Races category in STF1 identified themselves as being of Spanish Origin.

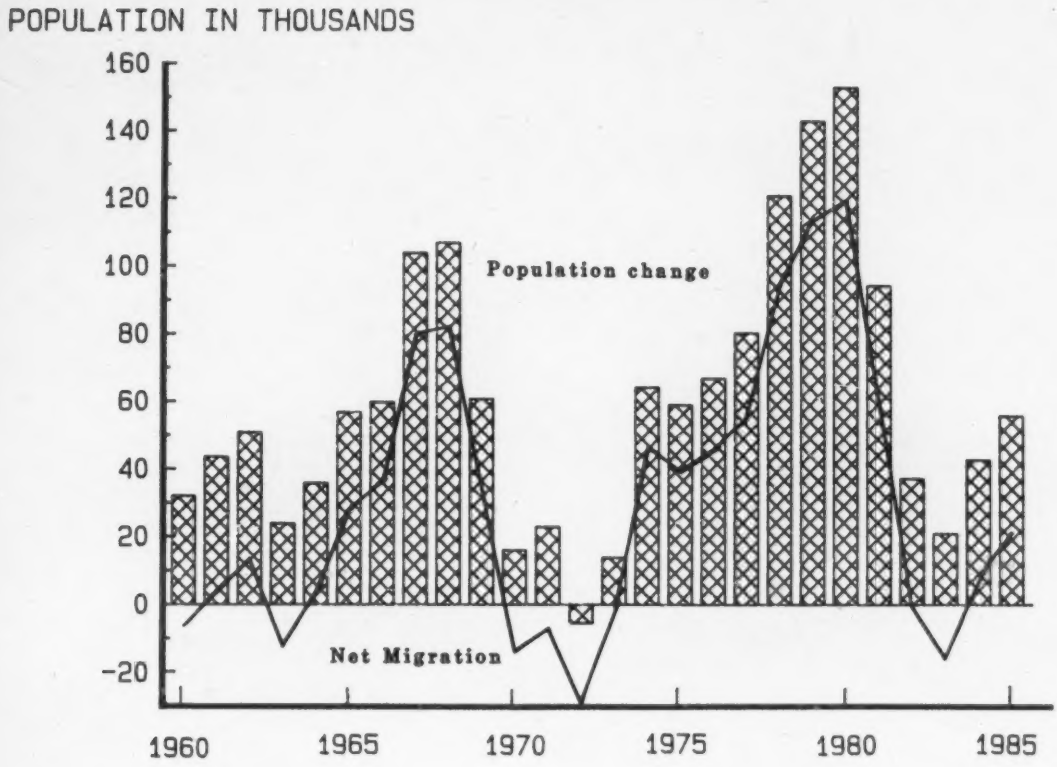
FIGURE 2

POPULATION CHANGE AND NET MIGRATION
STATE OF WASHINGTON
1960 - 1985



- THE COMPONENTS OF POPULATION CHANGE IN WASHINGTON REFLECT THE STATE'S ECONOMIC FLUCTUATIONS. DURING THE RAPID ECONOMIC EXPANSION OF THE LATE 1960s AND 1970s, WHEN THE ANNUAL STATE POPULATION GROWTH RATE WAS THREE PERCENT OR HIGHER, NET INMIGRATION ACCOUNTED FOR APPROXIMATELY 75 TO 80 PERCENT OF THE STATE'S POPULATION CHANGE.

- SLOWER GROWTH PERIODS ARE CHARACTERIZED BY THE NET LOSS OF PERSONS SEEKING EMPLOYMENT OPPORTUNITIES IN OTHER STATES, WITH NATURAL INCREASE (BIRTHS - DEATHS) ACCOUNTING FOR THE STATE'S POPULATION INCREASE.

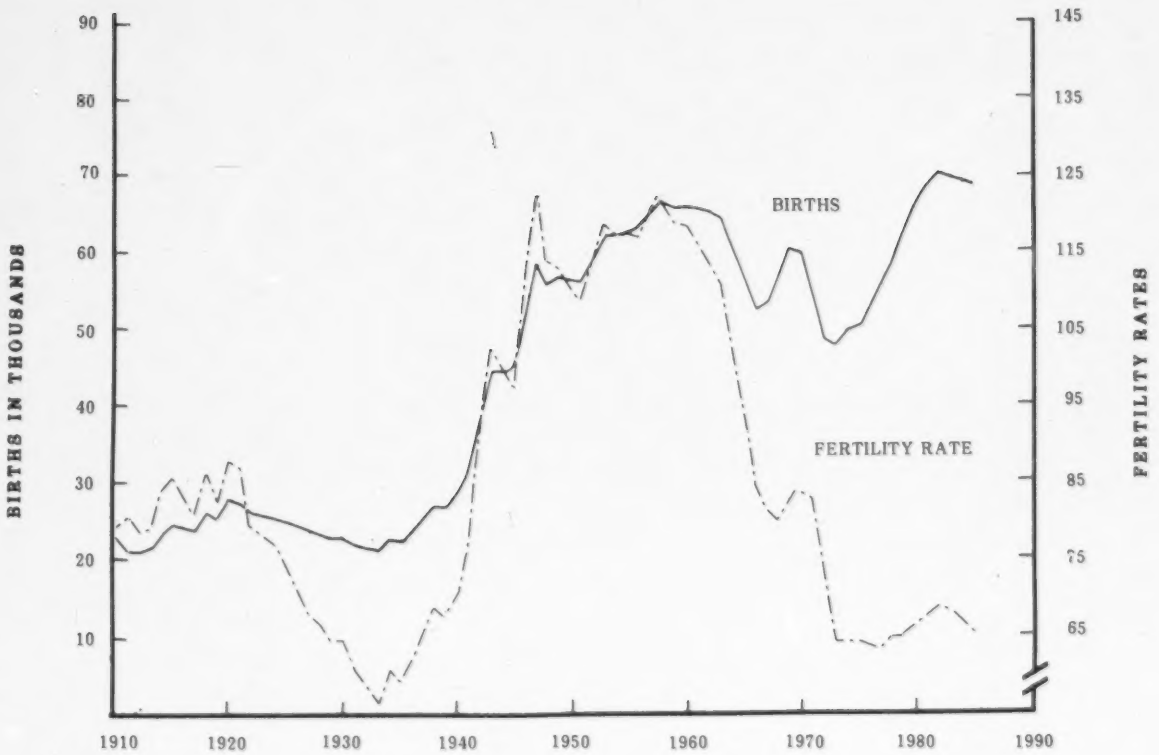
FIGURE 3

A DEMOGRAPHIC ROLLER COASTER
BIRTHS AND BIRTHS PER 1,000 WOMEN 15-44 YEARS
STATE OF WASHINGTON
1910-1985



- THE NUMBER OF BIRTHS IN WASHINGTON, WHICH STEADILY INCREASED FROM 47,697 IN 1973 TO 70,051 IN 1982, IS NOW SHOWING A SLIGHT DECLINE. THERE WERE AN ESTIMATED 69,463 BIRTHS IN 1983, 68,713 IN 1984, AND 68,600 IN 1985.

- THE FERTILITY RATE (NUMER OF BIRTHS PER 1,000 WOMEN IN CHILDBEARING AGE) DECLINED FROM 67.9 IN 1983 TO 65.2 IN 1985 DUE TO LOWER BIRTH LEVELS. THE RATE, HOWEVER, REMAINS HIGHER THAN DURING THE 1970's.

- THE TREND AWAY FROM EARLY MARRIAGE AND EARLY CHILDBEARING IS EXPECTED TO CONTINUE, AS IS THE PREFERENCE FOR SMALLER FAMILIES. THE AVERAGE NUMBER OF CHILDREN EXPECTED BY MARRIED WOMEN AGED 18-24 YEARS, WHICH DECLINED FROM 2.9 IN 1967 TO 2.2 IN 1974, REMAINED ESSENTIALLY CONSTANT THROUGH 1983.

TECHNICAL NOTES

TWENTY-FIVE YEARS OF ANNEXATION ACTIVITY IN WASHINGTON STATE

by

Julie Baker

Cities and towns are dynamic entities. They come into existence, grow, decline, shift their geographic boundaries, and sometimes disappear in response to the social, economic, and political concerns of their citizens. Washington State now has 266 cities and towns. Over the last 25 years the state has gained two new incorporated places, Ocean Shores (1970) and Mill Creek (1983); relocated one, North Bonneville (1977); lost three, Houghton (1968), Mercer Island Town (1970), and Westlake (1972); and shifted boundaries 3,719 times.[1/]

From April 2, 1960, to April 1, 1985, cities and towns annexed territories with populations totaling 177,557 at the time of annexation. The incorporated area of the state grew by approximately 371 square miles. A breakdown of annexation activity during the 1960 and 1970 decades and for the 1980 to 1985 period follows.

TABLE 1

ANNEXATION ACTIVITY IN WASHINGTON STATE
APRIL 2, 1960 TO APRIL 1, 1985

April 2 - April 1	Number of Parcels	Area in Sq. Miles	Population Annexed[2/]	Number of Cities
1960 - 1970	1,270	160.89	116,631	143
1970 - 1980	1,716	125.51	37,688	180
1980 - 1985	657	84.14	23,238	154

Table 1 indicates that the number of cities annexing is increasing over time and the annexments of the 1970s and 1980s are less populous than those of the 1960s.

1/ The State of Washington has certified 3,719 annexations, incorporations, and other municipal boundary changes from April 2, 1960, to April, 1985.

2/ The resident population of annexed territories is determined by actual enumeration in accordance with the practices and policies of the Office of Financial Management, and require state certification.

A relatively small number of cities accounts for a large proportion of annexations. During the 25 year period, 37 municipalities added over 1,000 persons by territorial expansion. The population gained thorugh annexation by the following cities and towns represents 86 percent of the total number of persons added to incorporated areas directly through boundary change activities.

TABLE 2

MUNICIPALITIES ANNEXING TERRITORY WITH POPULATIONS OVER 1,000 APRIL 2, 1960 TO APRIL 1, 1985

Municipality	Population of Annexation	Municipality	Population of Annexation
Bellevue	38,505	Auburn	2,224
Everett	11,914	Normandy Park	2,223
Edmonds	10,883	Marysville	2,171
Kennewick	8,941	Centralia	2,023
Bremerton	8,706	Pasco	1,910

Longview	2,386	Sunnyside	1,012
Kent	2,352	Walla Walla	1,004
Redmond	2,281		

Sixty-one municipalities added populations over 100 and 77 municipalities did not add any population attributable to annexation.

The geographical expansion of cities and towns seems to be declining over time. The average number of square miles acquired per municipality through annexation was 1.25 in the 1960s, .70 in the 1970s, and .56 in the 1980s. Table 3 shows territorial expansion by square mile for municipalities that added more than one square mile. It indicates the magnitude of the physical growth of individual incorporated areas for each decade.

It is difficult to evaluate the impact of annexations on municipal population growth. Factors such as city services, residential development, real estate prices, household size, zoning, and business patterns in the old city and its new territory may affect population gains through annexation. At the same time that the population in recently annexed territories is growing, the older city core and surrounding neighborhoods may be experiencing a population loss. Annexation often picks up families that have moved from the city to the suburbs. Increased city services and zoning changes may draw new development into an area. As municipal development proceeds and the cost of land in the city rises, another cycle of territorial expansion may be required for population growth.

The most phenomenal growth for the period occurred in the cities of Bellevue and Everett. Both cities crossed the 50,000 population mark between the 1960 and 1970 census. Bellevue's population grew from 12,809 in 1960 to 61,102 in 1970 and to 73,903 in 1980. Everett's population increased from 40,304 in 1960 to 53,622 in 1970 to 54,413 in 1980. A large part of these population gains is due to the annexation activity shown in Table 2.

Although the heavily populated fringe areas of cities and towns were absorbed in the 1960s, municipalities continue to annex at an increased rate in the 1970s and, so far, in the 1980s. Annexation is one factor in municipal population change. In many cases, annexation is an ongoing force in the dynamic existence of cities and towns.

A PREVIEW: REVISED CENSUS ENUMERATOR'S MANUAL

by

Theresa Lowe

Washington continues to support an active special census program. Since 1980, approximately 400 local governments have conducted an actual count of their residents for state revenue sharing purposes. This article provides a potpourri of special census information that will be incorporated in the revised Washington State Census Enumerator's Manual due for release in 1986.

Special census counts represent a true cooperative effort between state and local staff. The primary purpose of conducting a special census is to obtain accurate population and housing counts. They require a considerable expenditure of both state and local resources. Standard census procedures and definitions used to count population and housing are designed to ensure accurate counts. The forthcoming Enumerator's Manual will provide explanations of why various census procedures are required. Selected census procedures and some of the revised procedures to be included in the new manual are presented below.

LISTING OF RESIDENTS BY NAME

Census procedures require that the residents in each household or group quarters facility be identified by name. A listing of names is a quality control requirement that helps ensure an accurate and verifiable count.

- Listing residents by name promotes honest reporting.

  Annual population determinations are used to allocate nearly $100 million to cities and towns each year. In rare instances, enumerators being paid on a "per person counted" basis, and even some city personnel, have attempted to increase their counts by adding nonexistent persons to the schedules. Listing the names promotes honest reporting. The provision of "names" allows for quick field verification of accurate counts. The counts for selected households may also be verified from the office by using the names to contact persons by telephone.

- Listing names provides for accurate tabulation.

  The entry of each person by name allows for accurate tabulation of the census results. Simple numerical entries to indicate the number of persons in a house such as "1", "2", or "3", are often difficult to read. This is particularly true when the entries are made by several enumerators with poor penmanship.

- Listing of names allows for identification of duplicate entries.

Accurate census results rely on systematic canvass procedures. Each house must be contacted, but only once. Address systems in many local areas are insufficient to permit ready identification of canvass errors or other types of errors that lead to duplicate counts. The major errors leading to duplicate entries are specified below:

- Enumerators stray beyond their assigned area.

- A block that appears to have been missed is re-canvassed by field checking staff. Actually, the households have been counted, but misidentified and combined with the count for an adjacent area.

- The wrong house is enumerated on a return visit, or information called into the census office is assigned to the wrong house. (In both cases, the correct house needs to be enumerated when a duplicate is identified.)

- Persons counted in a group quarter facility (e.g., nursing home) are also reported as a household family member.

- Children are reported as living with both parents in a divorced home.

Listing household and group quarter residents by name is essential to verify counts and resolve the problems that occur from canvas errors. As public resistance to providing the names of household members increases, an enumerator's ability to discuss the reasons the names are required becomes increasingly important. Most people are willing to provide the information when it is recognized as a necessary requirement for an accurate count, and when they are assured the information will be kept strictly confidential. An example of a possible doorstep handout to be used by the enumerator is provided on the next page.

PROCEDURE FOR ENUMERATING LARGE APARTMENT COMPLEXES

Persons living in large apartment complexes are often difficult to contact. Obtaining the required census information from apartment managers, rather than contacting the persons in each unit, has proved to be inaccurate. The following enumeration procedure should be used.

- Contact the apartment manager before you begin enumerating. Explain your activities, the purpose of the census, and obtain a listing of vacant units. Be careful to explain to the manager that a "rented" unit may be vacant. Often "rented" units are not yet occupied, and persons in the process of moving at the time of the census are counted as residents of the housing unit they are leaving. Inform the manager you may need additional assistance if persons in some units prove to be very difficult to contact.

- Use standard enumeration and callback procedures to enumerate the complex. Dinner and evening hours should be the most productive enumeration period unless most residents of a complex are elderly.

- Recontact the manager to secure a listing of the residents, by name, for those units you have been unable to contact after two visits.

- Use the names provided by the manager to attempt to make evening contacts by telephone.

- When all attempts at direct contact fail, record the names provided by the manager on the census schedule. Be sure the manager's information agrees with any other information furnished by persons in neighboring apartments.

EXAMPLE OF DOORSTEP HANDOUT

OFFICE OF FINANCIAL MANAGEMENT

STATE OF WASHINGTON

SPECIAL POPULATION CENSUS REQUIREMENTS:

- Each year the state allocates nearly $100 million to cities and towns for municipal services, such as fire and police protection and public health programs.

- The revenues are allocated on the basis of a city's population size. Your city has elected to conduct an actual door-to-door count to assure an accurate distribution of revenues.

- State certification of your city's census requires that persons living in each household or group quarter facility be identified by name.

- Population counts for a selected number of households will be verified in the field by state staff. A listing of names provides a means of verifying the counts and identifying the source of discrepancies.

- A listing of names is the only means of identifying duplicate counts which are a persistent problem in census tabulations.

- The information you provide will be kept strictly confidential. Only the final city population count will ever be released.

- Please do not confuse the current city census with surveys conducted by private firms intending to publish a city directory or sell a mailing list. The state will not use the names to develop a directory or mailing list. The names will only be used to verify the city's count.

- Your cooperation is essential. If you have any questions, please contact your city officials or population staff at the Office of Financial Management in Olympia at (206) 754-2804.

ENUMERATION OF MOBILE HOMES AND HOUSE TRAILERS

Mobile homes and house trailers should be included in a census. The mobile home/house trailer category represents movable housing units intended for permanent occupancy that are on private lots or in mobile home and trailer parks. Both occupied and vacant mobile homes and house trailers should be included in the census.

For enumeration and reporting purposes mobile homes and house trailers may be combined into a single mobile home/house trailer category. Separate reporting for census purposes has been discontinued because of the difficulty in making consistent and reliable distinctions between mobile homes and house trailers. Remember, double-wide mobile homes on cement or brick foundations are still movable living structures and should be classified as mobile homes. Do not count vacant house trailer pads or vacant slots in mobile home or trailer courts; no living structure is present.

If there is any doubt as to whether a trailer is a house trailer or a travel trailer, owners should be questioned as to whether the trailer is reserved for recreational use or intended for permanent occupancy.

NOTE: Travel trailers, motor homes, and other recreational vehicles are not considered housing units by the census definition. They are intended for temporary occupancy at some site other than the site where they are usually located. Travel-type living quarters are only included in a census when they are occupied and when the occupant(s) meet census resident definitions. In such circumstances these living quarters are classified as "specials".

ENUMERATION OF SPECIALS

Sometimes people live in unusual quarters on a permanent basis: tents, boats, houseboats, deserted boxcars, motor homes, travel trailers. If people use such quarters as their usual or permanent residence, then these unusual living quarters are counted as housing units.

Specials is a catch-all housing category for all types of housing units that do not fit the standard categories. Specials include living quarters that are intended for both permanent and temporary use. Remember, the occupants of living quarters that are not intended for permanent use must be bonafide residents of the area according to the Table of Residence Rules if the quarters are to be considered a housing unit.

ENUMERATION OF NEW CONSTRUCTIONS

New constructions pose special enumeration problems. There are two major problems. The first problem is identifying which new constructions should be included in the census counts as vacant units. Housing units under construction are included in the census count as "vacant units" when construction has reached the stage where the entire exterior shell is in place. That is, the roof, walls, windows, and doors are in place, and the interior of the unit is protected from the wind and rain. Units meeting this basic criteria should be listed as "vacant new construction" on the census schedule.

The second problem is recording the specific units under construction that have been excluded from the census count. Units under construction that do not meet the criteria to be counted at the time of the census should be recorded in a separate tabulation retained by the city. These units should be reported as new constructions the following year when the city submits housing information to OFM for its population estimates. Often cities will only submit information on units permitted after April 1 of the special census year. Units permitted prior to April 1 of the census year, but not counted in the census, are inadvertently excluded from the city's housing stock. All permitted and constructed units should eventually be tabulated as part of the city's housing stock. They should be included in the census, if they meet the criteria to be counted at that time — or counted the following year when submitting data on new constructions.

IMPORTANCE OF ENUMERATOR'S MANUAL

The success of a special census depends on early planning, careful mapping of the area to be canvassed, and on enumerators who faithfully carry out the instructions in the Enumerator's Manual. The forthcoming manual revisions will cover all phases of census planning and preparation, but the enumerator's role will remain the primary focus.

The enumerator's role is of crucial importance. Enumerators must be able to accurately count and record the population and housing units in their assigned area. Without conscientious and well-trained enumerators, a population census is not likely to be complete or accurate. The revisions in the forthcoming Enumerator's Manual are designed to aid the enumerator in providing accurate, consistent, and verifiable counts.

A POTENTIAL SOURCE OF POPULATION ESTIMATE ERROR: CITY COUNTS OF MOBILE HOMES/TRAILERS AND GROUP QUARTER POPULATION

by

Theresa Lowe and Diana Brunink

The Office of Financial Management develops annual April 1 population estimates for cities and towns using the housing unit estimation method. Updating the mobile home/trailer counts for each city and determining the city's group quarter population have proved to be troublesome components of the method and a potential source of estimation error. This article discusses the specific problems with mobile home/trailer and group quarter counts and shows the procedures used to reduce the estimation error. The basic housing unit formula is $P_t = (H_t\ O_t)\ PPH_t + GQ_t$, where

P_t is the total population at time t,
H_t is the total housing units at time t,
O_t is the proportion of occupied units at time t,
PPH_t is the average number of Persons Per Household at time t, and
GQ_t is group quarters at time t.

In practice, this method is refined by developing separate estimates of the household population by type of housing structure. An example is provided below.

1985 POPULATION ESTIMATE FOR CLARKSTON

Housing Type	1980 No. of Units (Census)	1980-85 Change	1985 Estimate No.of Units	Occupancy Rate	Occupied Units	Household Size	Household Population
Singles	2,128	-11	2,117	.9480	2,007	2.492	5,001
Duplexes & Apts.	751	28	779	.8973	699	1.663	1,163
M.H./Tr.	198	1	199	.9095	181	1.939	351
				Household Population			6,515
				Group Quarter Population			221
				TOTAL			6,736

TABLE 1

Postcensal population estimates require an accurate update of federal census counts of city housing and group quarter population. Each year cities provide information on new residential constructions and an actual count of their mobile home/trailers and group quarter populations. Cities provided such data for April 1 of 1980 as the Office of Financial Management was required to make April 1, 1980, population determinations prior to the release of the federal census counts.

A comparison of the 1980 city data and federal census data for mobile home/trailers and group quarter population is shown in Table 1. In some cases the city counts are quite similar to the federal census counts. In other cases there is a large discrepancy. Most of the differences are due to the way the data are classified and collected in the federal census compared to local determinations. Population estimates, as updates of federal census counts, must be developed from data that are consistent with federal definitions and tabulations. Specific problems, in terms of the comparability of the data, are discussed separately for the mobile home/trailer housing category and group quarter population.

MOBILE HOME/TRAILERS

Two factors account for most of the differences between the city and federal census counts of mobile homes and trailers in 1980.

- 1980 census counts are low because many mobile homes and trailers were misclassified as single family units in the 1980 census data.

  People living in mobile homes and trailers preferred to classify their home as a "one-family house" on the 1980 census mailback questionnaire.[1] Data collection procedures did not permit strict adherence to structure type definitions. As a result, 1980 census single family unit counts are inflated; the mobile home/trailer counts are low.

1/ Postcensal evaluation surveys found that even in mobile home parks up to 20 percent of the respondents classified their homes as single family structures. States collecting local data for estimation puposes, such as Washington and California, found the local counts to exceed the federal counts by nearly 15 percent.

- 1980 city counts are low due to poor coverage of mobile homes and trailers on individual lots and in smaller trailer parks.

  Many cities obtain current counts of mobile homes and trailers by calling mobile home parks and trailer courts to obtain the data. If the city has a substantial number of mobile homes and trailers on private lots, or if all of the parks are not contacted, survey coverage will be poor and the city count will be low.

Annual data submitted by cities on mobile homes and trailers must be adjusted to account for 1980 census misallocation error and city survey coverage problems. An example of the procedure used is provided.

MOBILE HOME/TRAILER ADJUSTMENT

City	1980 Census Mobile Homes/ Trailers	1980 City Reported Mobile Homes/ Trailers	1985 City Reported Mobile Homes/ Trailers	Difference	1985 Adjusted Mobile Home/ Trailers
	(1)	(2)	(3)	(4)=(3)-(2)	(5)=(1)+(4)
Pasco	890	946	1,080	134	1,024
Kennewick	1,263	1,365	1,519	154	1,417
Longview	308	526	460	-66	242

The difference between the city count in 1980 and the city count for 1985 is simply added to (or subtracted from) the 1980 federal census count. This procedure eliminates a double count of the mobile homes and trailers that are already in the 1980 federal census count of single family units due to misallocation at the time of the census. It also corrects for errors in the city count due to the exclusion of mobile homes and trailers on private lots.

GROUP QUARTER POPULATION

Differences between the 1980 city counts and federal census counts of group quarter population are primarily due to survey coverage and classification errors in the city data. Group quarter population is sometimes difficult to identify and enumerate. According to federal census definitions, group quarters reflect other than ordinary household living arrangements. The category includes persons in mental and penal institutions, homes for the aged, or other long-term custodial care facilities. It also includes groups living in facilities or private homes where 10 or more unrelated persons live together such as college dormitories, military barracks, or students sharing a house.

Errors in the city group quarter counts stem from several sources.

- 1980 city counts are low due to poor coverage of group quarter facilities.

  Group quarter populations excluded from the city counts are typically small custodial care facilities not listed in the telephone directory or situations where 10 or more unrelated persons live together in a house. Such places are often identified only at the time of an actual census.

- 1980 city counts are high due to a misclassification of household population into the group quarter category. Several sources of misclassification contributed to high counts.

  - Persons in short-term care facilities such as alcoholic rehabilitation programs or temporary juvenile detention centers are misclassified as group quarters.

  - Short-term care patients may be erroneously included with the count of long-term care patients in institutions or nursing home facilities. Some nursing homes, for example, provide transition care for persons released from a hospital but not yet sufficiently recovered to return home.

- Apartments for the elderly are confused with nursing homes and the residents are erroneously classified as group quarter population. This often occurs when a housing development for retired persons includes both apartments and a nursing home facility.

- Students residing in university controlled apartments are erroneously included with college and university dormitory counts.

When city counts of group quarter population are low, reflecting poor coverage of the actual population, unadjusted data would result in a low estimate of the city's total population. A misclassification of household population as group quarter population results in an inflated population estimate. Short-term care patients and all persons in apartments are included in the 1980 base census data used to develop the current estimate of household population. To include such persons again in the group quarter population figure results in a double count.

The annual group quarter population counts submitted by cities must be adjusted for misallocation and city survey coverage problems. The adjustment technique is identical to the method used to adjust city mobile home and trailer data. An example is provided.

GROUP QUARTER POPULATION ADJUSTMENT

City	1980 Census Group Quarter Population	1980 City Reported Group Quarter Population	1985 City Reported Group Quarter Population	Difference	1985 Adjusted Group Quarter Population
	(1)	(2)	(3)	(4)=(3)-(2)	(5)=(1)+(4)
Longview	487	605	544	-61	426
Port Angeles	516	356	367	11	527
Vancouver	1,317	1,394	1,611	217	1,534

The difference between the city count of group quarters in 1980 and the city count in 1985 is simply added to (or subtracted from) the 1980 federal census count of group quarter population. This adjustment provides a reasonable correction for misallocation of population to the group quarters category and coverage problems.

DISCUSSION OF THE ADJUSTMENT PROCEDURE

The procedure used to adjust the annual city counts in mobile home/trailers and group quarter population should provide accurate update of 1980 census data for population estimation purposes. The adjustment procedure, corrects for city survey coverage and misallocation error that existed in 1980. It is assumed that the data submitted by cities in 1980, and annually thereafter, is comparable in terms of coverage and category allocations. Cities should be careful to report any changes in their collection procedures due to misallocation errors that have been identified since 1980. Correction due to misallocation should be made to the data for the current year's data and the 1980 city counts.

Population staff at the Office of Financial Management will be glad to respond to any questions concerning the mobile home/trailer and group quarter adjustment procedure presented in this report.

Household Size Trends for Washington Cities that Conducted a 1985 Census

by

June Van Leynseele

Sixty-eight cities in Washington conducted a special census to determine their 1985 population. These census data provide an excellent source of information on trends in houshold size. Trends indicated by this year's data shown in Table 15 are summarized below.

- In general, average household size continues to decline in Washington. For cities that conducted a census in 1985, household size in one unit structures dropped from a prior average of 2.7 to 2.6; mobile homes and trailers declined from 2.4 to 2.3. The average decline for apartments was somewhat less, from a two-per-unit average prior to 1985 to a current 1.95.

- In each housing category, the majority of cities showed a decline in average household size: 62 percent in single family units, 58 percent in multiples, and 52 percent in mobile homes and trailers.

- Western Washington cities that conducted a census were larger than those in Eastern Washington, the respective median populations being 1,092 and 392.

- Household size in single family units declined more frequently in larger cities. Eighty-five percent of the cities with a population of 2,500 or more showed declines, as compared to only 55 percent of the cities with less than 2,500 people.

- Average household size in single family units is generally larger in large cities, 2.9 as compared to 2.5.

- Average household size in mobile homes and trailers is generally higher in small cities than in large, 2.3 and 2.1 respectively.
